

RICOH® RA2K PRINT & COPY CONTROL

PCC Integration Option for Equitrac Office™

Complete Cost Control – No Extra Hardware

With Ricoh's unique RA2K Integration Technology, you'll be able to control user access and track copy/print information via software embedded onto the hard disk drives of select Ricoh output systems. And, because RA2K Integration is built right in, installation couldn't be easier. Just configure network settings, enter a key code and start tracking directly from the operator panel.

Integrated Copy Control

The RA2K Integration for Print and Copy Control (PCC) enables you to manage all account codes from a centralized location. To initiate the copy process, users simply enter a PIN number or network ID to unlock the system. Upon completion, the transaction is sent to the Equitrac Office™ server for centralized reporting.

Document Security

In addition to tracking walk-up copy jobs, PCC enables you to implement a secure printing environment that eliminates the worries of confidential information falling into the wrong hands. Once again, a user simply enters a PIN number or network ID, selects a job from the job list and then presses "print". Users can even select multiple print jobs without changing screens.

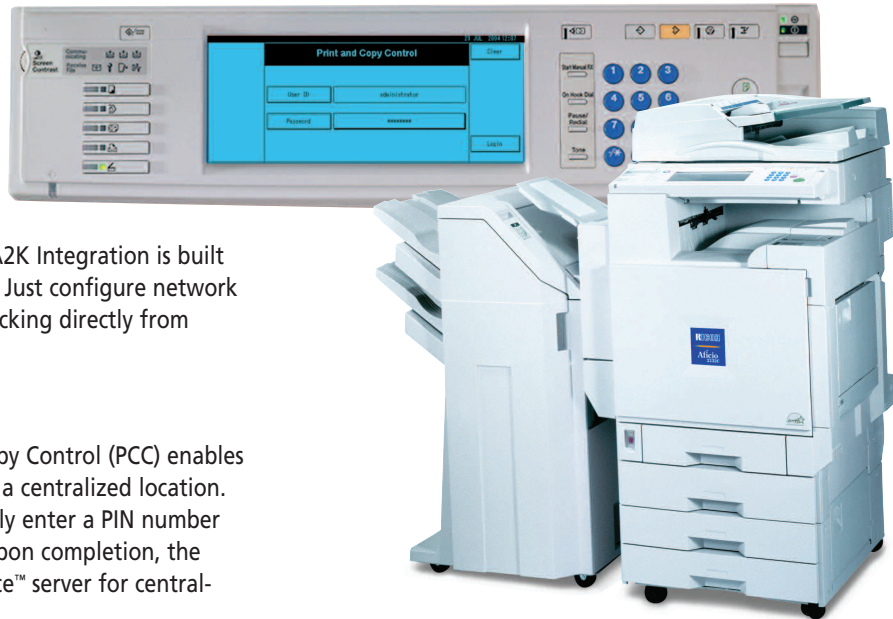

Client Billing

With the client billing module of Equitrac Office, project resource management is made simpler. At the start of each walk up copy job, a billing code is assigned to copy transactions. You can specify whether the copy job is a billable or non-billable customer transaction. Your Equitrac Office database stores these transactions under the selected billing code.

A Plus on the Bottom Line

RA2K Integration Technology eliminates the need to install, configure and service external hardware—along with multiple copier interface cables. If you're looking for a simple and cost effective approach to hardcopy cost management, look no further than RA2K Integration Technology.

For a list of supported models, please consult your authorized Ricoh Reseller.

Utilizing Ricoh's Next Generation Architecture, RA2K software plug-ins enable our "Intelligent Network Output Devices" to seamlessly integrate with key customers' applications. For a list of these applications, consult your Ricoh Reseller.
